

Services

Business logic. Services uses Dao, DaoExt and DaoComp. **Services never contains SQL codes!**

DaoExt and DaoComp

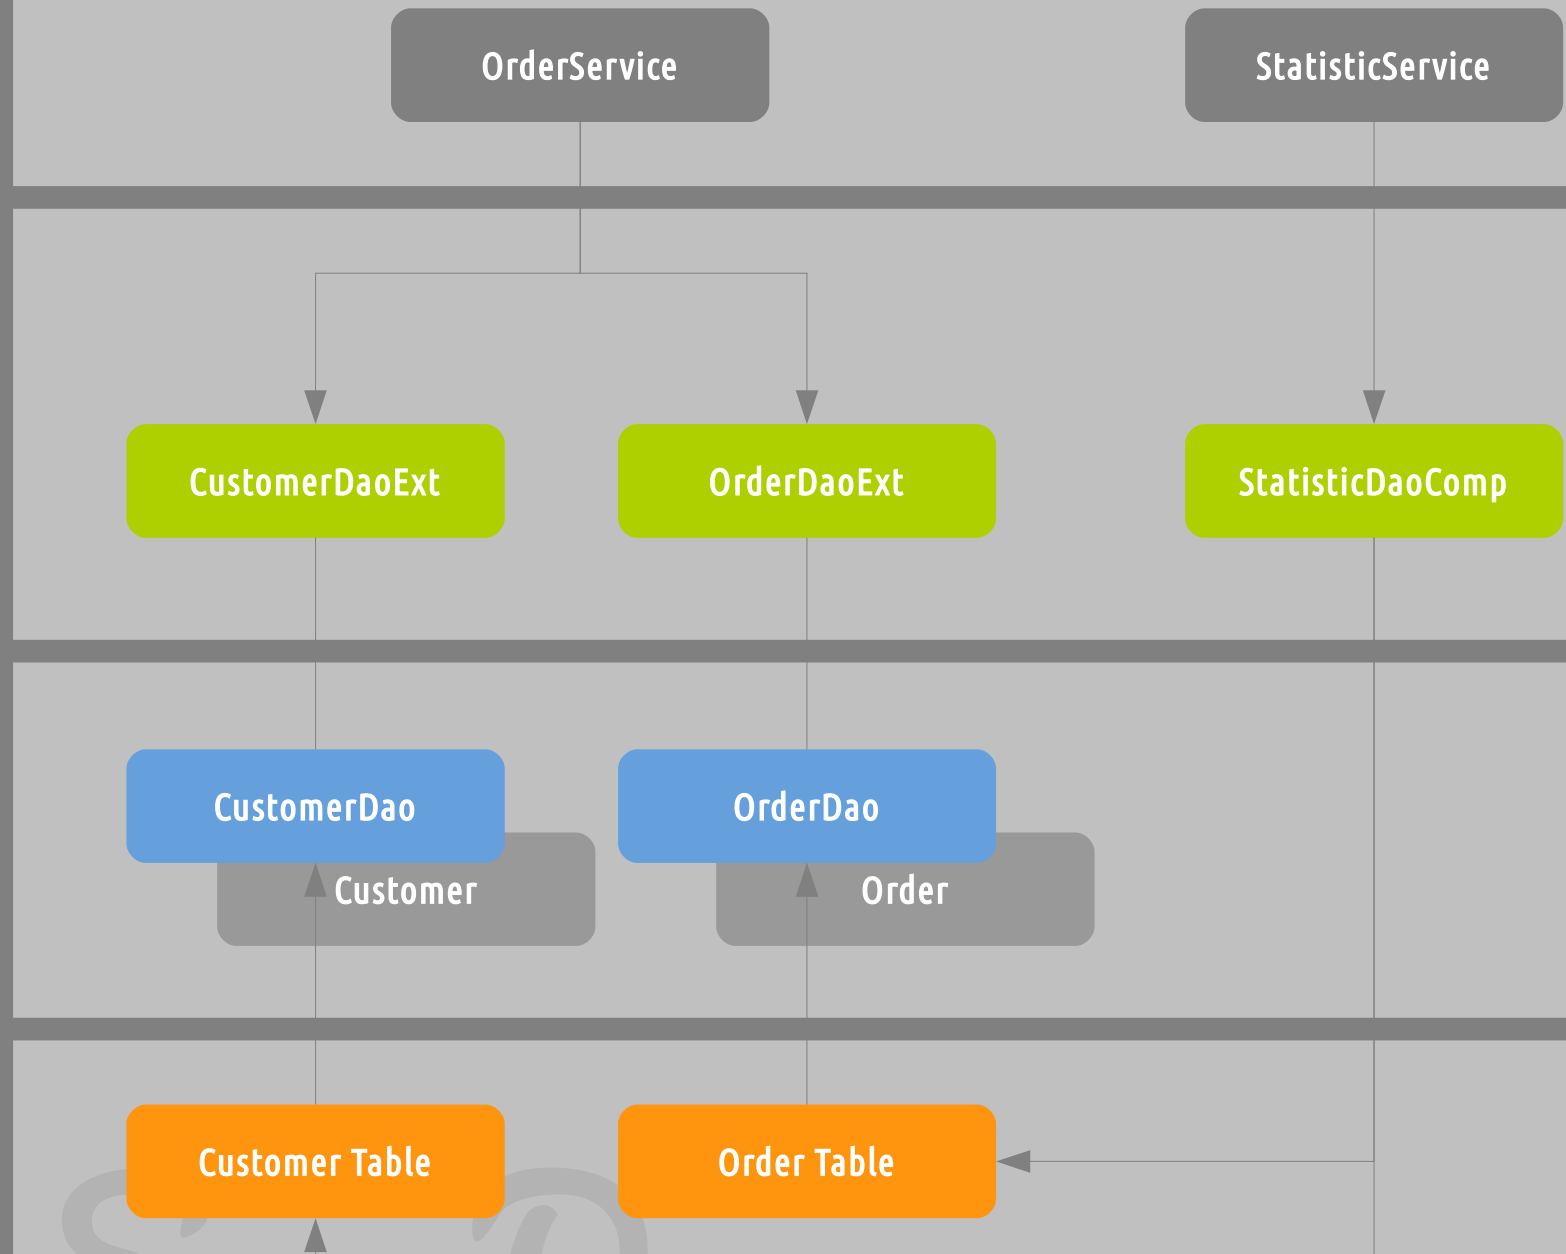

Classes has been written by programmers. These are extended Dao classes. For example: lookup a Customer by Name fragment. Composite Dao direct uses tables with unique SQLs, for example call a PL/SQL method.

Dao and Model

Classes generated from database. Dao has basic methods for CRUD operations.

Database

Database is the base of source code generation. You must take several important convention when you design the database.

EasyDao
